

Download Aquifer Storage And Recovery In The Comprehensive Everglades Restoration Plan

The restoration of the Everglades is an ongoing effort to remedy damage inflicted on the environment of southern Florida during the 20th century. The Everglades is a natural region of tropical wetlands in the southern portion of the U.S. state of Florida, comprising the southern half of a large drainage basin and part of the neotropic ecozone. In 2000, Congress passed the Comprehensive Everglades Restoration Plan (CERP), which is the roadmap to restoring the Everglades. Treatment, Best Practices and Increased Water Storage. From the sawgrass marshes and tree islands of the Everglades to the mangrove stands along our coastlines and the wetlands, uplands, lakes and river floodplains of the interior, nutrients like phosphorus were once found at very low levels. - Aquifer Storage And Recovery In The Comprehensive Everglades Restoration Plan
