

Download Chips From A German Workshop - Volume I

A note on the emblems of the Evangelists follows in the remarks on the combinatory forms met in grotesque art. Early developments of the integrated circuit go back to 1949, when German engineer Werner Jacobi (Siemens AG) filed a patent for an integrated-circuit-like semiconductor amplifying device showing five transistors on a common substrate in a 3-stage amplifier arrangement. I know this may be old news to some of the GPS enthusiasts of the world, but there is this company from New Zealand that is making some really ridiculously small GPS tracking chips – and I mean ridiculously small. Dear Twitpic Community - thank you for all the wonderful photos you have taken over the years. We have now placed Twitpic in an archived state. - Chips From A German Workshop - Volume I
