Bovine somatotropin or bovine somatotrophin (abbreviated bST and BST), or bovine growth hormone (BGH), is a peptide hormone produced by cows' pituitary glands. Like other hormones, it is produced in small quantities and is used in regulating metabolic processes. After the biotech company Genentech discovered and patented the gene for BST in the 1970s, it became possible to synthesize the ...A suite of drying technology platforms developed by researchers at Monash University could help extend the shelf life of Australia's powdered dairy exports – including infant formula – while meeting stringent safety and quality benchmarks.AABP684: Comparison of serum progesterone curves in beef heifers during luteolysis after administration of dinoprost in the muscle or the ischiorectal fossa [ 1 modules] - \$40 Many producers and veterinarians report injection of products in the rear legs or hip due to convenience or lack of access to the neck.1. Introduction. The use of biosensors and wearable technologies is becoming increasingly important for animal health management. These devices, if built precisely and used correctly, can provide timely diagnosis of diseases in animals, eventually decreasing economic losses. - Metabolic Disorders And Their Prevention In Farm Animals (developments In Animal & Veterinary Sciences S.)
